| github.com/magfrfr |

PROFESSIONAL SUMMARY

Biotechnology student at Manipal University Jaipur. Built a machine learning model that reads EEG brain signals, the same signals used in stroke rehabilitation research. Vetted 150+ startups for an investment network, biotech among them, and ran go-to-market at an early-stage startup. Most useful where biology, data and business meet.

EXPERIENCE

Web Development Intern | AGT Go Digital, Coimbatore **May 2026 – Jun 2026**

- Built a complete portfolio website on WordPress, working solo: custom block child theme, PHP templates, theme.json design tokens and custom CSS.
- Shipped it live on Vercel as a static export, using a custom Node crawler to snapshot the site to plain HTML.

Customer Strategy & Founder's Office | Walkins **Dec 2024 – Dec 2025**

- Owned user acquisition and go-to-market. That work got Walkins selected into Localhost HQ, top 20 projects nationally.
- Built the pitch that secured multiple grants, seed offers and incubation.

Investment Analysis | Alpha Seed Network **May 2025 – Jul 2025**

- Vetted 150+ early-stage startups across biotech, deeptech and consumer. Reports fed directly into portfolio decisions.
- Mapped competitors and market conditions for each company; findings shaped which deals the fund moved forward on.

PROJECTS

Motor Imagery Brain-Computer Interface | github.com/magfrfr/motor-imagery-bci **2026**

- Built an end-to-end EEG classification pipeline on PhysioNet motor imagery data: 224 trials from 5 subjects, 64 channels at 160 Hz, 8-30 Hz mu/beta bandpass, bandpower features across C3, Cz and C4, the scalp sites over the brain's movement areas.
- Implemented CSP decomposition, fitted inside each cross-validation fold so no test labels reach the spatial filters. Compared LDA and SVM; SVM reached 68.3% cross-validated accuracy against a 50% chance baseline, on left vs right hand motor imagery.

Web Development | Next.js, React, TypeScript, Three.js **2026**

- Designed and built an interactive React portfolio site, solo, from first sketch through deployment: magadhiravishankar.vercel.app
- Shipped a Next.js site for a yoga studio, live on its own custom domain: sriyogastudio.com
- Built a personal brand site with a streaming LLM chat endpoint on the Groq API, live on its own domain: rsofficial.net

EDUCATION

B.Tech Biotechnology | Manipal University Jaipur **Expected 2027**

Senior Secondary | Schram Academy, Chennai **Until 2023**

SKILLS

Technical: Python, NumPy, SciPy, scikit-learn, MNE, Matplotlib, Biomedical Signal Processing (EEG), Machine Learning, Data Analysis, JavaScript, TypeScript, React, Next.js, Three.js, Tailwind CSS, LLM APIs, Git, WordPress, PHP

Strategy: Customer strategy, go-to-market, investor reporting, pitch development, biotech market research

Languages: English, Hindi, Tamil

ACTIVITIES

Junior Committee Member, IEEE | Tennis (competitive) | Table Tennis (competitive) | Bharatanatyam | Horse Riding | Swimming | Yoga (Ashtanga advanced) | MMA |
